

## **Switching to JMRI**

In October 2024 I began the process of installing JMRI to run the Hornby Elite

The install of JMRI was simple but I had all sorts of problems getting the Elite Driver recognised as a com port (until I tried it on my main computer)

All the JMRI stuff was added as exclusions to defender and every organised to run as Admin but it wa still flaky to say the least.

Anyrail has the facility to export a JMRI panel layout so this was utilised after giving all the points labels to match my points database

It was then necessary to create real hardware addressable turnouts and switch each point individually to these turnouts. Dummy 100 points were created to support crossover pairs for 3, 4, 7 and 14.
